**THE GENERAL CARE AND CLEANING  
OF ANY POLYSTONE SINK**

---  
PolyStone vessel sinks are designed to be mounted on top of the countertop. For general maintenance, all can be regularly cleaned with mild soap, warm water and a soft non-abrasive sponge. Wiping down and drying any sink after each use is the best protection against hard water creating blemishes. For a thorough cleaning after extended uses, or to remove stubborn stains, follow the instructions on the reverse side.

## CLEANING INSTRUCTIONS (cont...)

## PolyStone Sinks

**AVOID HARSH CHEMICALS**

Keep away from rough cleaners that include solvents, acid, alkali or any other abrasive solutions that can potentially damage your sink. Protect the sink from lacquer, nail polish remover, organic solvents, or any other related alcohol related products.

**SANITIZATION**

Make sure to clean a PolyStone sink regularly. After using any safe cleaning solution, it is necessary to rinse the product with warm water and mild soap in order to remove any trace of cleaning products.

**REMOVE STAINS**

In case you have to remove a stubborn stain, it is safe to use a Mr. Clean Magic Eraser® to softly scrub away any discoloration.

**HARD WATER**

Wipe the sink dry with a soft cloth after each use to maintain the sink's beauty, especially if you have hard water. Water spots caused by hard water can create mineral stains that cannot be removed.
