

THE BATTERY

1. The battery is a source of electrical energy.
2. It consists of several cells connected in series.
3. Each cell contains a different metal and an electrolyte.

4. The battery provides a steady flow of current.
5. It is used in many electronic devices.

6. The battery is a primary cell.
7. It is not rechargeable.

TABLE 1

Cell	Electrode	Electrolyte
1	Zinc	Zinc sulfate
2	Carbon	Carbonic acid
3	Zinc	Zinc sulfate
4	Carbon	Carbonic acid
5	Zinc	Zinc sulfate
6	Carbon	Carbonic acid
7	Zinc	Zinc sulfate
8	Carbon	Carbonic acid

TABLE 2

DISCUSSION

The battery is a source of electrical energy. It consists of several cells connected in series. Each cell contains a different metal and an electrolyte. The battery provides a steady flow of current. It is used in many electronic devices. The battery is a primary cell. It is not rechargeable.

The battery is a source of electrical energy. It consists of several cells connected in series. Each cell contains a different metal and an electrolyte. The battery provides a steady flow of current. It is used in many electronic devices. The battery is a primary cell. It is not rechargeable.

The battery is a source of electrical energy. It consists of several cells connected in series. Each cell contains a different metal and an electrolyte. The battery provides a steady flow of current. It is used in many electronic devices. The battery is a primary cell. It is not rechargeable.
