

- 1** Position the tree trunk in your desired location. If installing outside, use the three bolts to secure position

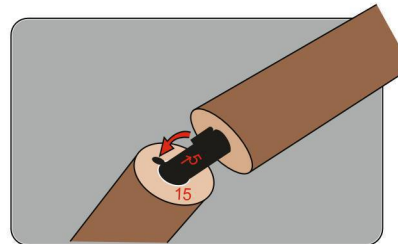

- 2** The trunk comes in numbered sections which need matching.

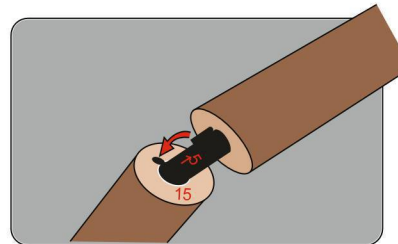

- 3** Connect the male/female electrical connectors.

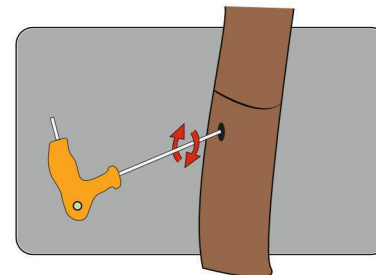

- 4** Screw the protective cap over the connectors to ensure a watertight seal.

- 5** Push the connected wires into the base making sure the wire is not pinched or caught and slot into place.

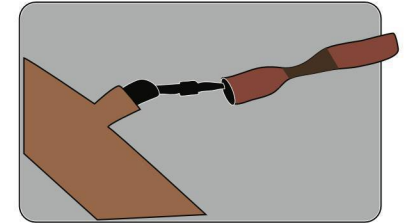

- 6** Using the large Allen key secure the trunk with the grub screw.

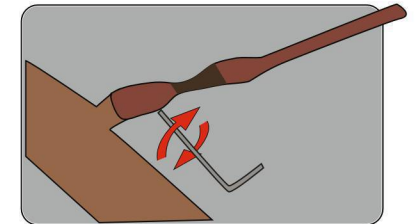

## PLACING THE BRANCHES

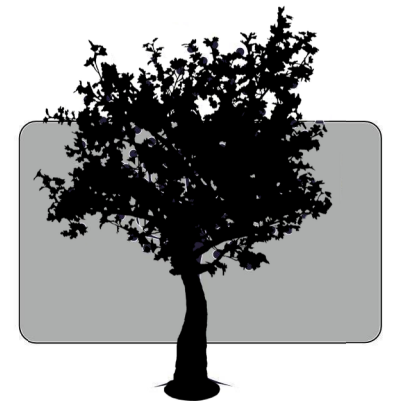

- 7** Connect using the male / female sockets and then screw the protective cap over the connectors to ensure a watertight seal.

- 8** Fix the branches in place using the small Allen key

- 9** Arrange the branches as desired, plug in...

...and ENJOY!!
