### MATERIAL

---  
Our stainless steel sinks are made from 304 steel and have a variety of bowl options. The chemical property, composition, mechanical properties and corrosion resistance of our stainless steel provides the best all-around performance at a relatively low cost. Stainless steel also has a brushed satin finish that works to conceal small scratches that may occur over time. Most of our stainless steel sinks are made by pressing a sheet of rolled out steel over a die to form the shape of the sink.
