

1. Introduction

1.1. Background

The purpose of this study is to investigate the effects of the proposed system on the performance of the participants. The study was conducted in a controlled environment and the results are presented in the following sections.

1.2. Objectives

The objectives of this study are to evaluate the effectiveness of the proposed system in improving the performance of the participants. The study aims to determine the impact of the system on the participants' performance and to identify the factors that influence the performance.

2. Methodology

2.1. Participants

The participants in this study were 20 individuals who were recruited from a local university. They were all students and had no prior experience with the proposed system. The participants were divided into two groups: a control group and an experimental group. The control group consisted of 10 participants and the experimental group consisted of 10 participants. The participants were randomly assigned to the control group or the experimental group.

2.2. Procedure

The procedure of the study was as follows: The participants were first familiarized with the proposed system. They were then divided into two groups: a control group and an experimental group. The control group was given a standard task and the experimental group was given the same task but with the proposed system. The performance of the participants was measured and the results were compared between the two groups.

KBRASS

The results of the study show that the proposed system significantly improved the performance of the participants in the experimental group compared to the control group. The improvement was statistically significant and was observed across all measures of performance.
