

User Care Manual-Bar Stools

Care and Cleaning

Dust regularly with a soft, lint-free cloth or a lint roller to prevent staining from dust, dirt, and other unclean particles. A damp cloth may be used minimally to clean outer surfaces. Remove any stains immediately with a mix of mild dish washing soap and water. Test a small area for any discoloration before proceeding. Make sure surfaces are dry after finishing. Keep your product away from any abrasives that may damage the finish or tear the materials. Moisture and humidity may damage and otherwise deteriorate the wood frame. Keep your product out of excessive sunlight and extreme changes in temperature to preserve the integrity of your product.

Maintenance

Check periodically if the bolts and screws have loosened over time and tighten them accordingly. Dry and remove any moisture or other liquid particle build-ups from bolts and screws to prevent rusting.

Moving

Lift to move the bar stool. Do not drag the product on the floor.
