

LAMP POST W/PHOTO EYE INSTALLTION DHI SKU# 502047

1

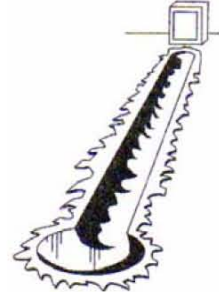

Turn off power supply to post.

2

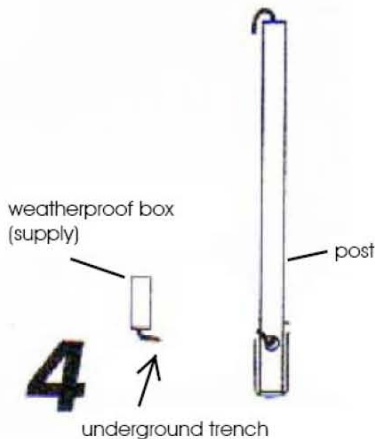

Dig a hole 12" diameter by 18" deep. Fill in 6" with gravel.

3

Dig a trench from power source to lamp post hole.

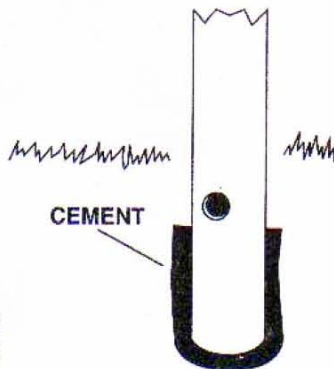

4

Make power connection through a weatherproof box and run line through trench to lamp post hole. Feed line from the inlet hole at post base to the top of the post.

Check with local authorities for specific electrical code requirements for your location.

5

Place post at the center of the hole then fill with concrete to just below the wire inlet hole at the post base.

6

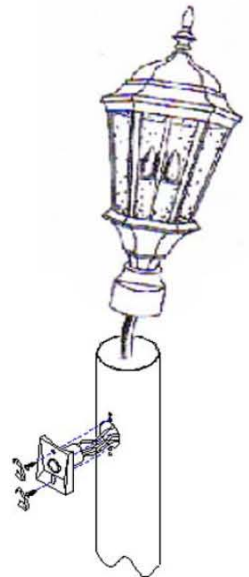

Photo eye kit installation

1. Connect black photo eye wire to black power supply wire.
Connect red photo eye wire to black postlight wire.
Connect white photo eye wire to all other white wires.
2. Screw the photo eye kit to the lamp post.

Post light installation

Wire supply lines to post light following manufacturer's instructions.
