

The Iris table lamp transforms its form and the atmosphere in a room by changing its light direction and projections. By adjusting this lamp you can have a strong up light that lights the room or a down light made of light reflections around the lamp, or mixture of both. The reflective interior of the this table lamp casts intricately patterned reflections that change as the lamp's configuration is changed.

The Iris Lamp is the fruit of years of development of the patented overlapping leaves mechanism, first explored in lighttexture's Steamlight series. (Patent #8,025,430) Composed of overlapping stainless steel leaves, each Iris Lamp has two adjustable apertures; as one opens, the other closes. The transition between these two provides a variety of reflections and light atmospheres.

**Specifications:**

**Lamp Base:** G4

**Wattage:**

**Supplied bulb:** 7W LED Bulb

**Warranty:** 1 year

**Country of Manufacture:** USA

**Weight:** 3 lb.

**Listing:**

**Base and Shade Material:** Stainless Steel

**Finish:** Brushed and polished stainless steel
