S I N K S

REQUIRES  
FARMSINK BASE

## What size cabinet should I use?

Fireclay sinks are all unique and will vary. The measurements given in dimensional drawings and specifications are nominal. What does that mean? It means that there is a tolerance of .25" and that the sink you receive can measure differently from the listed dimensions. The best practice when determining what size apron cabinet to use would be to receive your sink, then measure it to determine the width of your apron base cabinet. The cabinet must be wide enough to accommodate the sink. This can also be different depending on the desired cabinet style; some are wide with decorative framing and others more narrow and close to the sink's edge.
