

## Cement Tile Sealant Recommendation & Information

Not all sealants are best for sealing your hand crafted cement tiles!

Please use our recommended products below. If you decide to use another product, be sure to test it on a few tiles before using it on the entire installation.

**These hand-made Moroccan Cement Tiles can be installed like any other tile! However, they **MUST BE SEALED BEFORE & AFTER THE GROUTING PROCESS!****

**Recommendations:** Any thin-set mortar used for tile setting  
MMTH Uses: AcrylPro Ceramic Tile Adhesive

### **Ongoing Maintenance:**

- Cement tiles should be cleaned on a daily basis with water and a PH neutral soap or detergent.
- **DO NOT USE** bleach or any chemical cleaners on cement tile.
- Simply wet your tile and apply the soap/detergent with a sponge, Swiffer®, or similar cleaning tool. Rinse with water.

### **Stain Removal:**

- Many stains can be removed with Hydrogen Peroxide. Saturate a clean cloth or white paper towel and let it sit on top of the stain. Hydrogen Peroxide will not harm the tile.
- Deeper and difficult stains can be removed using a poultice method. Place a poultice powder on top of a stain (indirectly, using a paper towel to place the powder on). The poultice will then draw out the stain by absorbing it.
- Tougher stains can be removed with 220 Sand Paper. Sand the tiles individually & ONLY on the area that needs it. Make sure to sand the colors of the tiles separately, as sanding them together WILL create a smudged outcome. (Re-Seal the tiles after sanding them)

**PLEASE GIVE US A CALL AT (702) 749-8123, IF YOU HAVE ANY QUESTIONS DURING THE INSTALLATION OR SEALING PROCESS. WE ARE ALWAYS HAPPY TO HELP!**

### **Recommendations:**

We recommend using our in-house sealants, Impregnating Sealant and Topical Sealant. After testing many sealants, we have finally found a product system that works perfectly with our tiles. Our sealant products are very easy to apply and offer a beautiful finish available in either matte or semi-gloss.

The Impregnating Sealant will protect the entire tile from moisture. The Topical Sealant will protect the surface of the tile from stains, scratches, and other blemishes.

### **Sealing Instructions:**

1. Apply 1 coat of the Impregnating Sealant and wait for it to fully dry
2. Apply 1 coat of the Topical Sealant and wait for it to fully dry
3. Begin the grouting process with any un-sanded, neutral or off-white color grout  
**(WE DO NOT RECOMMEND DARK-COLOR GROUT!)**
4. Apply 2 coats of the Topical Sealant, but allowing each coat to fully dry in between

**NOTE:** The Sealant can be applied with a wool roller or sponge
