

What tools do you need?

- ✓ Pencil
- ✓ Utility knife
- ✓ Tape measure
- ✓ Silicone glue

• Measure your wall

Make sure your wall is clean, dry and dust free.

• How many panels do you need?

Panel: 19.7 in. X 39.4 in. Each panel covers approximately 5.3 sq. ft. One box contains 10 panels and covers 53 sq. ft. The area of a 12 feet wide and 8 feet tall wall is 96 sq. ft., which can be covered by 2 boxes, leaving 1 spare panel for cutting errors and rounding.

• Glue the panels

Apply the silicone adhesive on the back of the panel as shown in the image and stick the panel to your wall. You can start the installation process from the lower right or upper left corner of your wall. For a more dynamic view, you can use a panel that you previously cut out in the next sequence.

ENJOY THE LOOK OF YOUR NEW WALL
