

KINGSTON

How do you
measure?

Size	Weight	Length
Small	100g	10cm
Medium	200g	20cm
Large	300g	30cm

Weight and length measurements are used to determine the size and age of the fish.

This section contains a grid of small images, each showing a different fish species. The images are arranged in rows and columns, and each image is accompanied by a small label or measurement. The labels are likely the same as those in the table above, indicating the size, weight, and length of the fish. The images are used to illustrate the variety of fish species found in Kingston and to show how they are measured.
