# 2022 Installation Instructions for ON-the wall Magazine Racks

<b>Tools Needed:</b>	Stud Finder, Tape Measure, Pencil, Hammer, drill, 1/8" drill bit or awl, Phillips Screwdriver, Phillips Tip, Level
<b>01</b>	Depending on the product ordered, your rack may be unfinished, primed, or already pre-finished in a color. If your rack is unfinished or primed, paint or stain the rack as desired. You can remove the mounting brackets and put them in a safe place while you are finishing the rack. <b>Depending on the mounting method, you may not use all of the hardware we have provided.</b>
<b>02</b>	The mounting brackets (See figure A) have already been placed inside the rack for you. And the back panel has already been drilled and mounted in place with framing tabs that bend over to secure it. If you need to remove it, simply bend the tabs back and pull the panel out. Be sure to put it back in the proper orientation so that it lines up with the holes in the mounting brackets.
<b>03</b>	Determine the placement on the wall and mark the location of the mounting brackets on the wall surface. Check to see where studs are in your wall. If your locations match up, great. If not, you can use the included anchors in your wall mounting screws package.
<b>04</b>	Set the rack aside and using a 9/32" drill bit or awl, drill/puncture a hole in the position where you marked for the bracket to mount. This way your anchor will not wander when started. If your drill bit hits a stud, that's great, you won't need a drywall anchor for this location. If not, that's OK too – just use a drywall anchor in that position. Take the plastic drywall anchors provided and screw it into the drywall until it is flush. Do not over screw it. It just needs to be flush with the wall to be secure. See Figure B. Using the 2" drywall screws hold your spice rack in position of the anchors and tighten one at a time until the spice rack is secured to the wall. Do not overtighten or plastic brackets will crack.

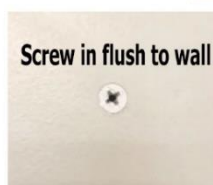

**Mounting  
Brackets  
Already  
Installed**

*Depending on  
model,  
mounting  
brackets may  
be either  
metal or  
plastic.*
