Preparation

1. Prior to installation, examine all boxes and packages for shipping damage and compare the piece count with the packing slip. After opening all boxes and packages read this introduction carefully. Check that all of the necessary parts are included in the package by checking off the components on the "Detailed Diagram of Shower Door Components". If the unit has been damaged, has a finishing defect, or has missing parts, please contact our customer support department within **3 business days** of the delivery date. **Please note that DreamLine® will not replace any damaged products or missing parts free of charge after 3 business days or if the product has been installed.** Feel free to contact DreamLine® if you have any questions, and please provide an order number, job name or other proof of purchase to help identify the original order.

2. Please note that you should consult your local building codes with questions on installation compliance standards. Building and plumbing codes may vary by location, and DreamLine[®] is not responsible for code compliance standards for your project and will not accept any returns.

3. If this unit is going to be installed in a new construction, please install all of the required plumbing and drainage before installing the shower. Use a competent and licensed (if required by local code) plumber for all plumbing installation

4. Make sure that prior to beginning the installation, the surfaces are leveled and solid and will be able to support the total weight of the unit. Also make sure the walls are at right angles. Irregular installation surface level, radius corners or improper angle of side walls will result in serious problems for your installation. Note that some adjustments and drilling will be necessary during the installation process.

5. Protect all primary surfaces of the product during installation. Never set the glass down directly onto a tile floor. Leave corner protectors in place until necessary to remove them. Always use a piece of wood or cardboard to protect the bottom edge and corners of the glass prior to and during installation.

6. This unit must be installed upon a finished threshold and against finished walls.

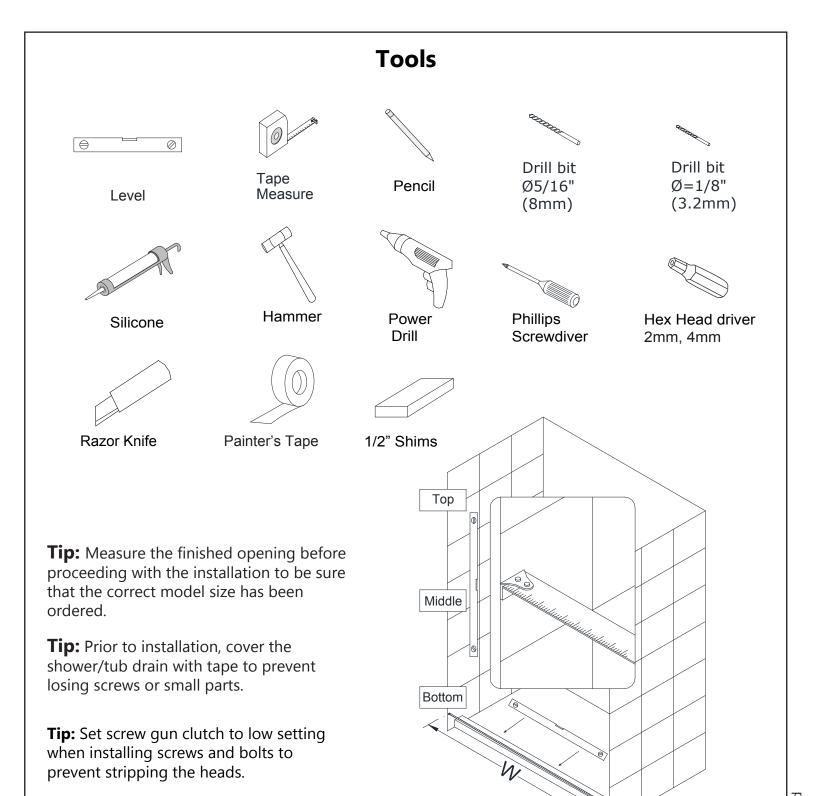

7. This model has **1**" of total adjustment (1/2" per side) for out-of-plumb wall conditions and/or overall width adjustment within the model size.

8. This model requires a minumum of **1-1/4**" of flat threshold space for installation.

9. Professional installation recommended.

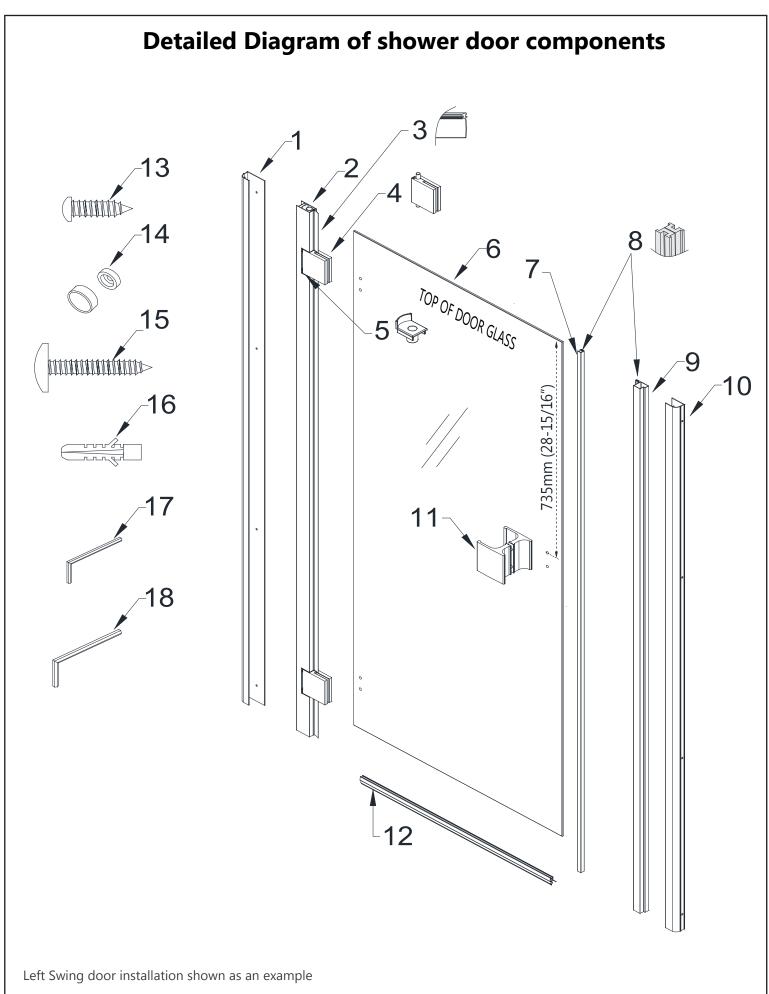

NOTE: <u>**Do Not**</u> attach the handle to the door glass until instructed. <u>**Do Not**</u> attempt to lift the door glass with the handle as this may result in damage to the glass and/or serious personal injury. Use a professional grade glass suction cup and an assistant if necessary.

NOTE: Unpack your unit carefully and inspect it. Lay it out and identify all parts using the detailed diagram and packing list in this manual as a reference. Before discarding the carton, check for small hardware bags that may have fallen to the bottom of the box. If any parts are damaged or missing, please contact DreamLine[®] for replacement. The shipping boxes may contain extra parts not used in your model configuration.

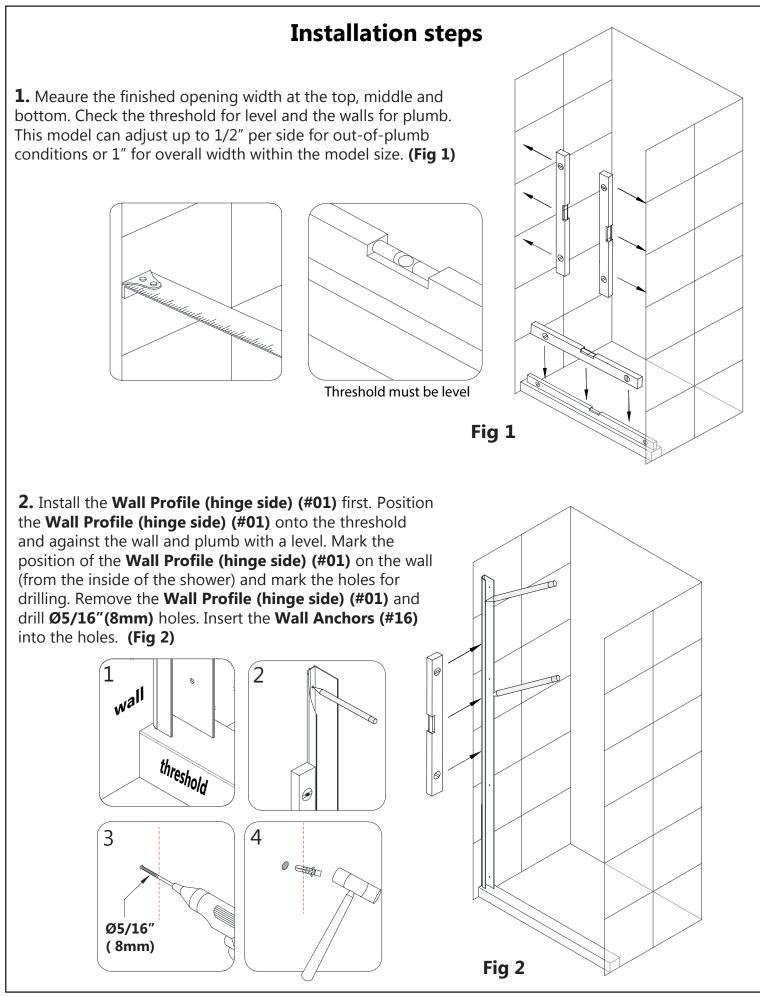

NOTE: Retain these installation instructions for future reference.

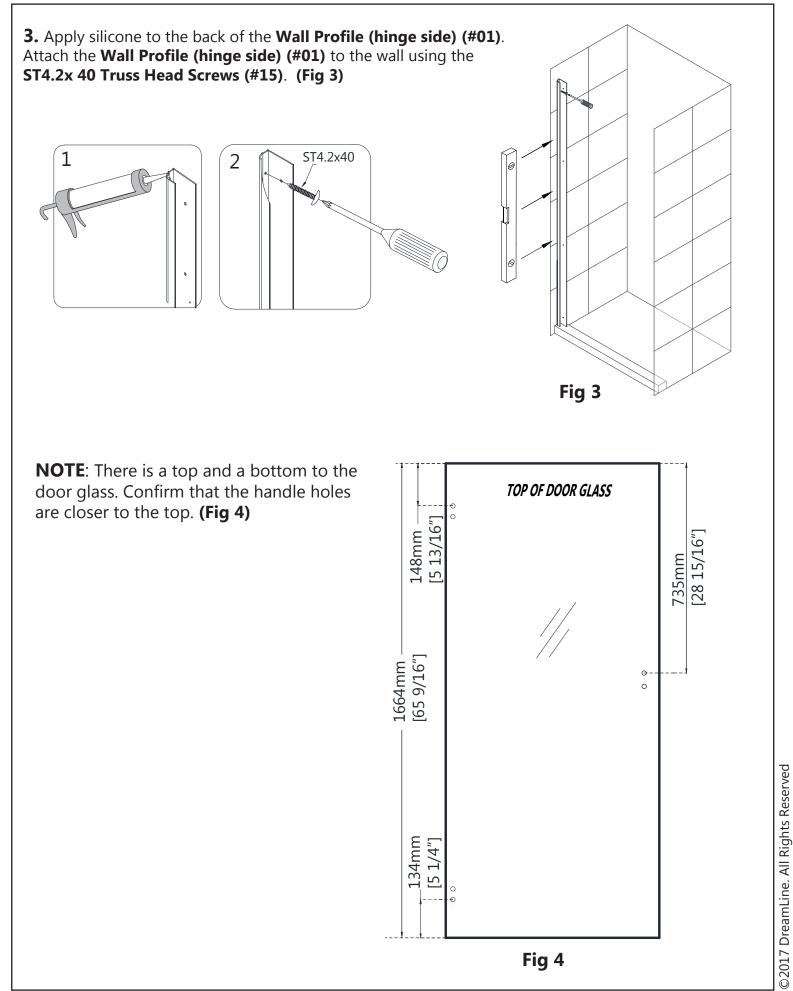

Parts List

BOLD digit indicates finish color: **1**= Chrome, **4**= Brushed Nickel, **6**=Oil Rubbed Bronze, **9**=Satin Black

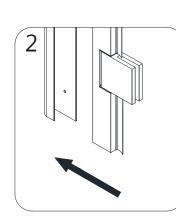

LUMEN manual Ver 1 Rev 1.1 09/2017

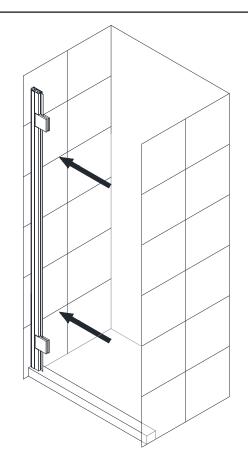

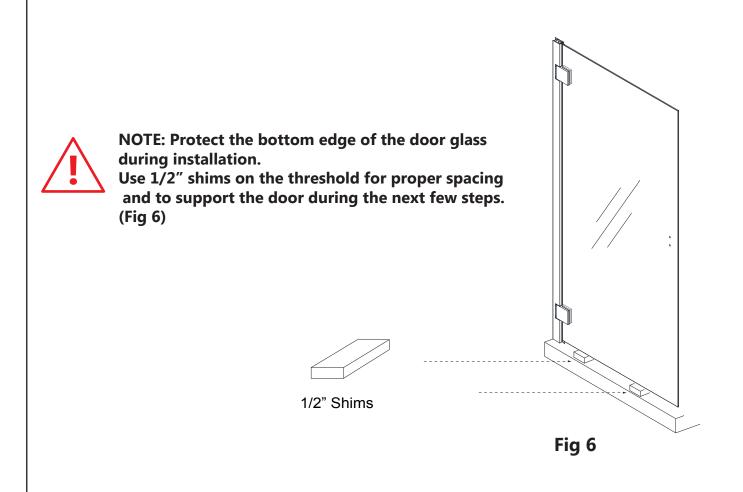

4. Slide the Hinge Profile (#02) assembly fully into the Wall Profile (#01). (Fig 5)

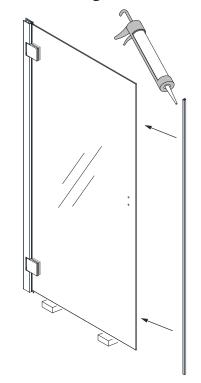

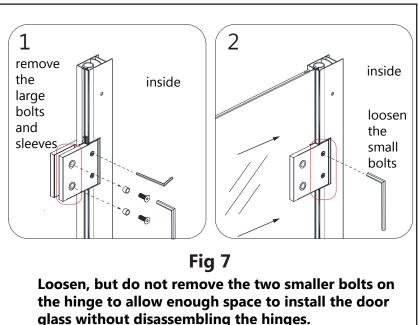

5. The Hinge Assemblies (#04) are pre-attached to the Hinge Profile (#02). Remove the large allen bolts and protective sleeves from the hinges. (Fig 7.1) Loosen the **smaller allen bolts** on the hinges to create enough space to slide the glass into the hinges.

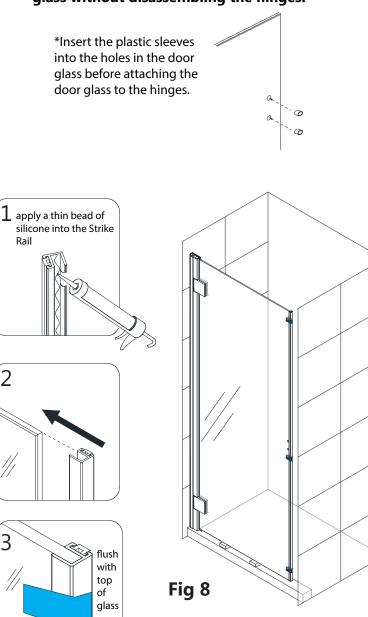

*Place the protective sleeves into the hinge holes on the Door Glass (#06).

Align the holes in the **Door Glass (#06)** with the holes in the hinges. Install the large bolts through the protective sleeves in the hinge holes and tighten. Re-tighten the small bolts on the hinges to secure the **Door Glass (#06)**. (Fig 7)

6. Clean the edge of the **Door Glass (#06)** prior to attaching the Strike Rail (#07). Apply a thin bead of silicone into the Strike Rail (#07) and attach it to the strike edge of the Door Glass (#06). Make certain that the Strike Rail (#07) is tight to the glass and flush with the top and bottom edges. Secure the rail in place with some painter's tape until the silicone cures. (Fig 8)

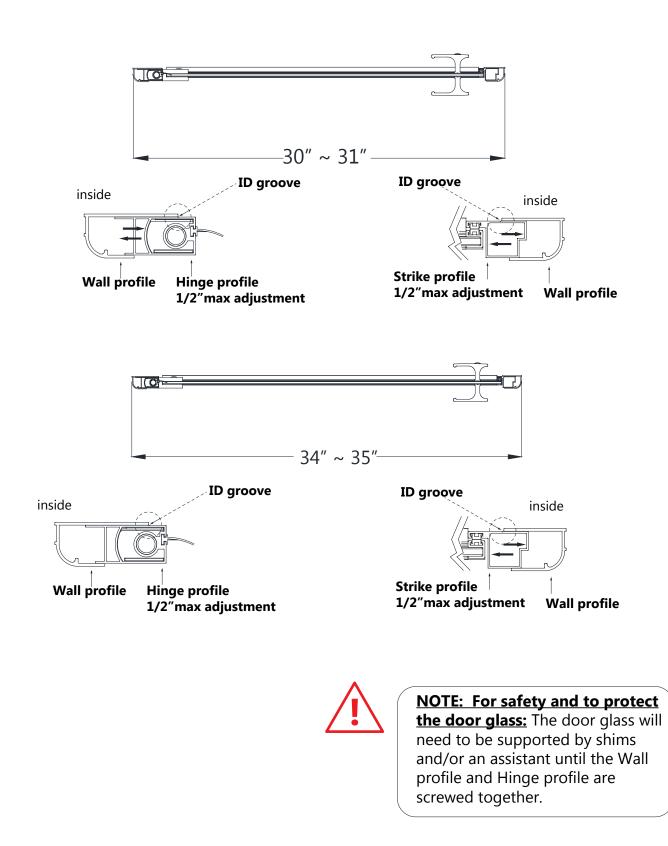

Rail

2

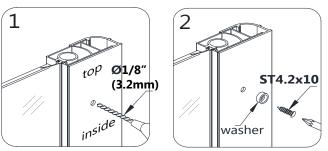

3

Position the tape so that it does not interfere with aligning the magnetic strips Adjust the strike and hinge profiles within the wall profiles to center the door within the model size range. Do not adjust either profile more than 1/2". The ID groove on the hinge profile and strike profile should not be visible. Do not over adjust the profiles beyond the ID groove .

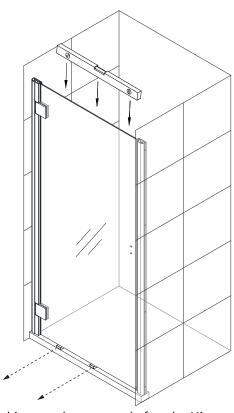

7. Check the door for level. Adjust the **Hinge Profile (#02)** as necessary. From inside of the shower, drill an Ø1/8" hole through the predrilled hole at the top of the hinge-side **Wall Profile (#01)** and secure the **Wall Profile (#01)** to the hinge profile using an ST4.2 x 10mm Pan Head screw (#13) and **Washer (#14)**. This will provide some support for the door until the remaining ST4.2 x 10mm (#13) screws are installed in Step #12, after the Strike side profiles are installed. This screw may need to be repositioned at that time depending on the finished opening conditions. (Fig 9)

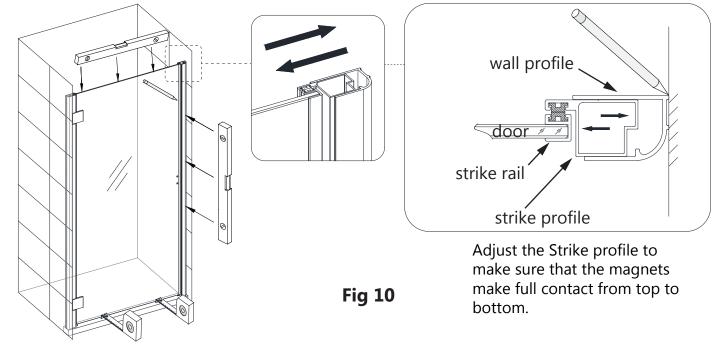

Left hinged door shown as an example

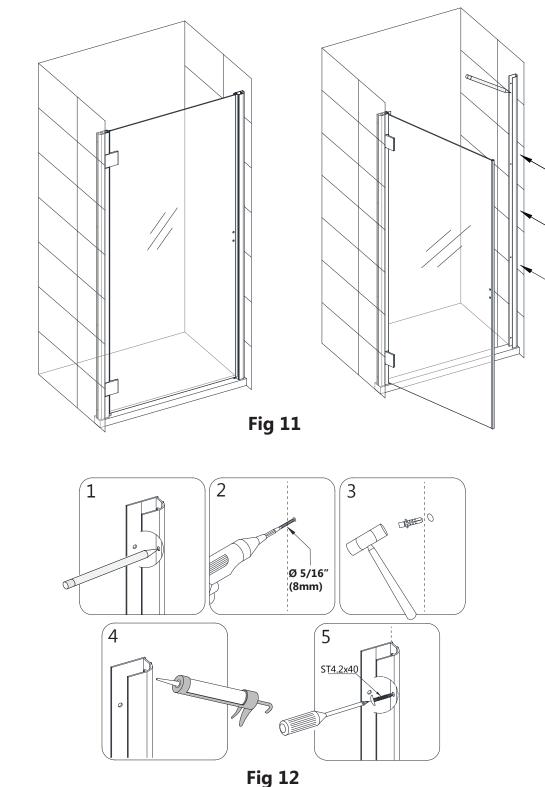

The 1/2" shims can be removed <u>after</u> the Hinge profile and Wall profile are screwed together **Fig 9**

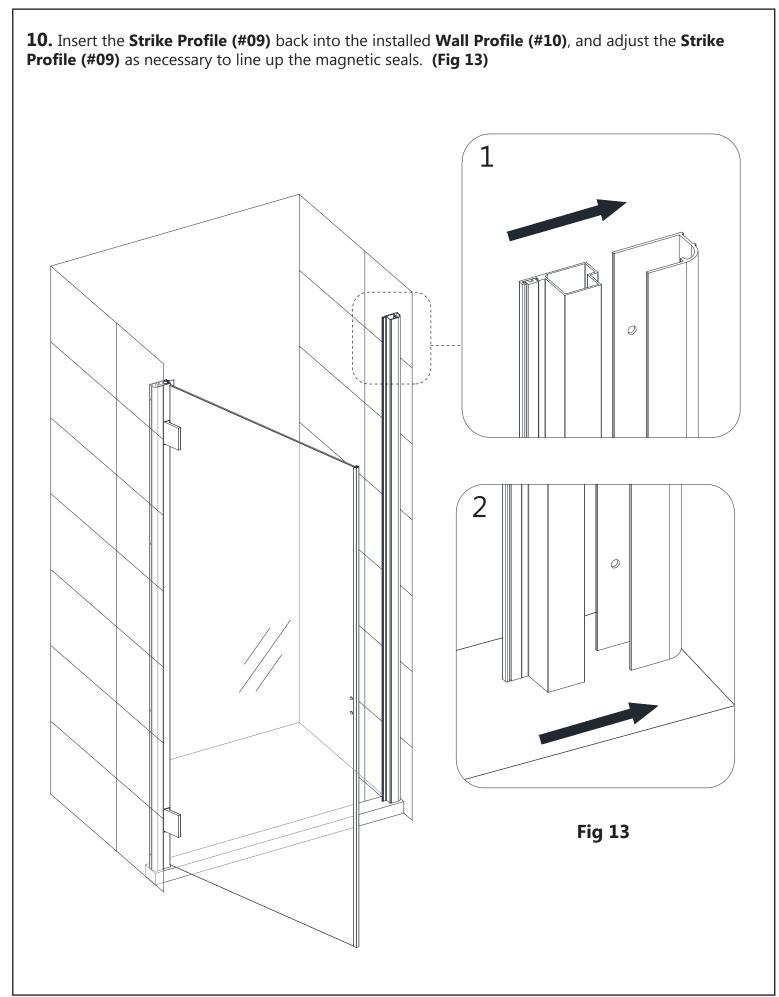

8. Position the Strike Profile (#09) and Wall Profile (#10) against the wall. Close the door and use a tape measure to align the Door Glass (#06) parallel to the front edge of the threshold. Align the Strike Profile (#09) with the Strike Rail (#07) on the edge of the door. Check the strike-side Wall Profile (#10) for plumb, but make sure that the magnets align. Adjust the Strike Profile (#09) within the Wall Profile (#10) for overall width or out-of-plumb.

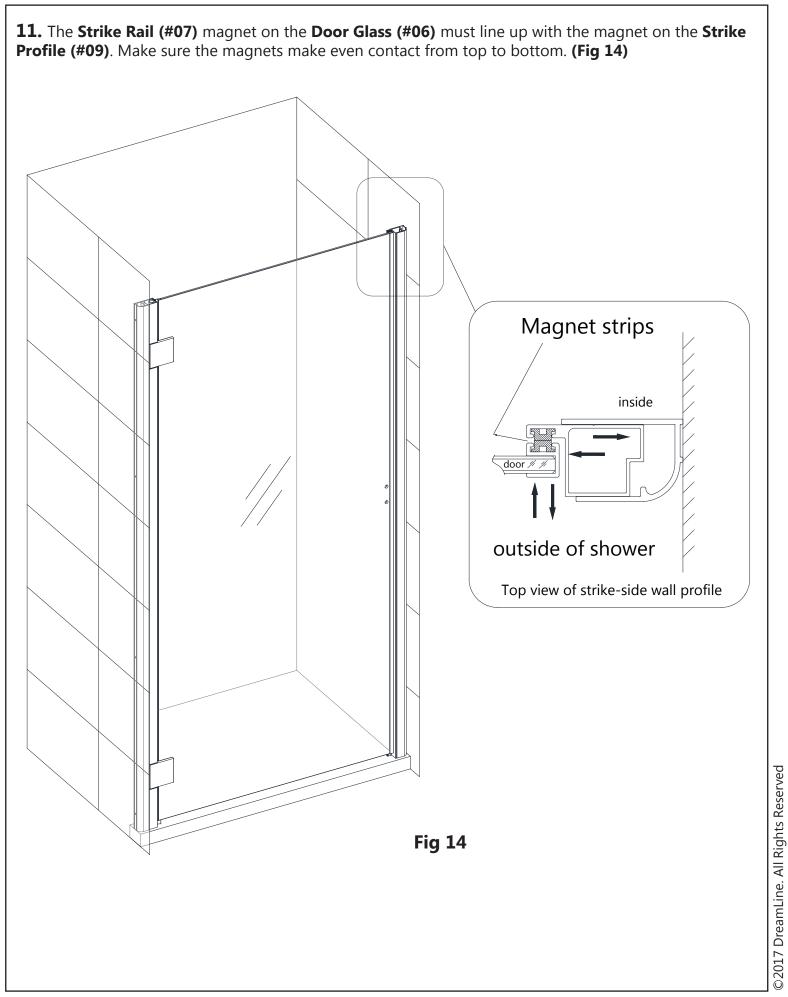

Mark the position of the **Wall Profile (#10)** on the wall from inside the shower. **(Fig 10)**

9. Open the door and remove the Strike Profile (#09) and leave the Wall Profile (#10) in position. Mark the holes for drilling through the holes in the Wall Profile (#10). Drill Ø5/16"(8mm) holes and insert the Wall Anchors (#16) into the holes. Apply silicone to the back of the Wall Profile (#10) and around the screw holes. Attach the Wall Profile (#10) to the wall using the ST4.2x 40 Truss Head Screws (#15). (Fig 11 and Fig 12)

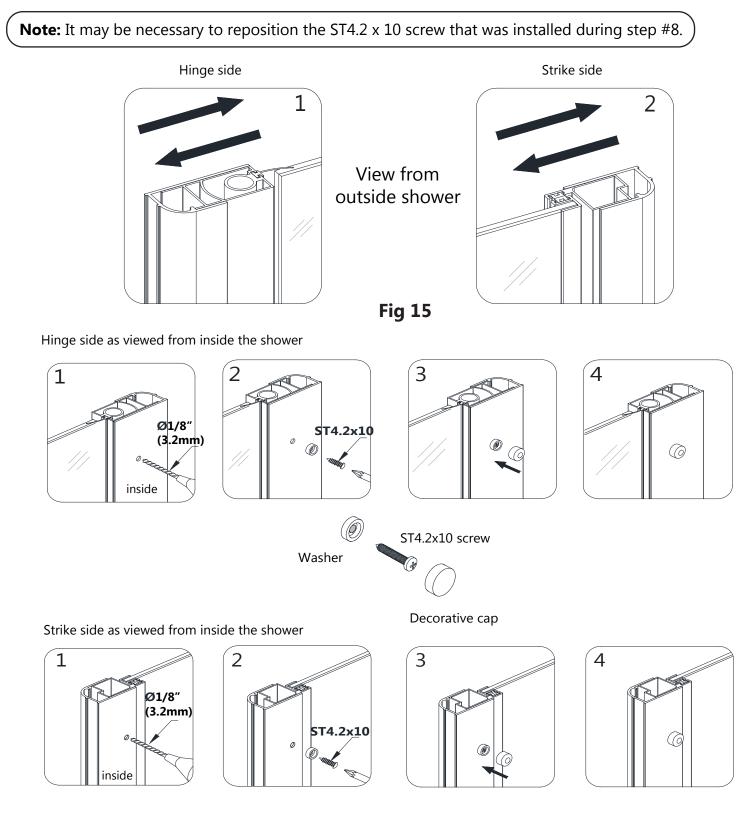

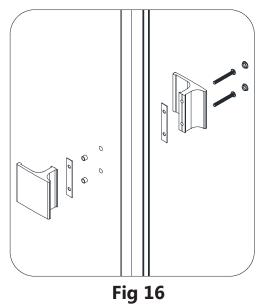

12. Adjust the door for level and plumb by adjusting the profiles on either side of the door. Use the pre-drilled holes on the inside of the **Wall Profiles (#01 and #10)** as guides. After making final adjustments to the **Door Glass (#06)**, drill holes into the **Hinge Profile (#05)** and **Strike Profile (#09)** through the pre-drilled holes in the **Wall Profiles (#01 and #10)** using an **Ø1/8**" (**3.2mm)** drill bit.

Note: Drill through one layer of the profile, not through the entire profile. Attach the profiles together using the **Pan Head Screws ST4.2x10 (#13)** along with the **Decorative Cap and Washer (#14). (Fig 15)**

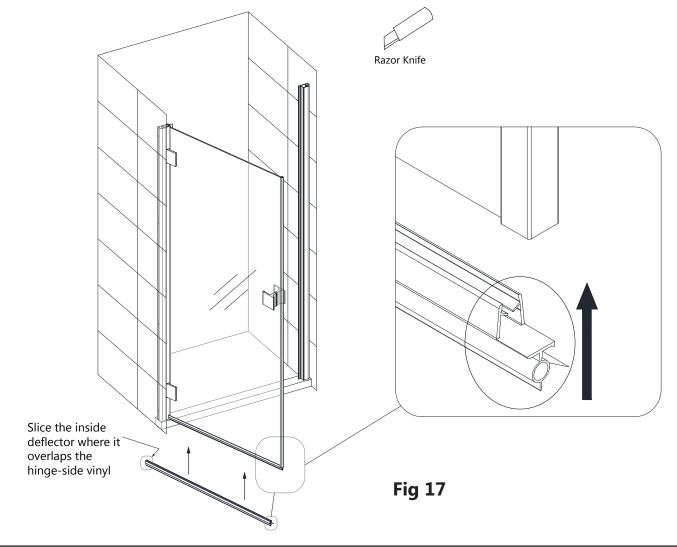

©2017 DreamLine. All Rights Reserved

13. Install the **Handle (#11)** on the **Door Glass (#06)** using **Pan Head Screw ST4.2x10 (#13)** and one gasket per side. (Fig 16)

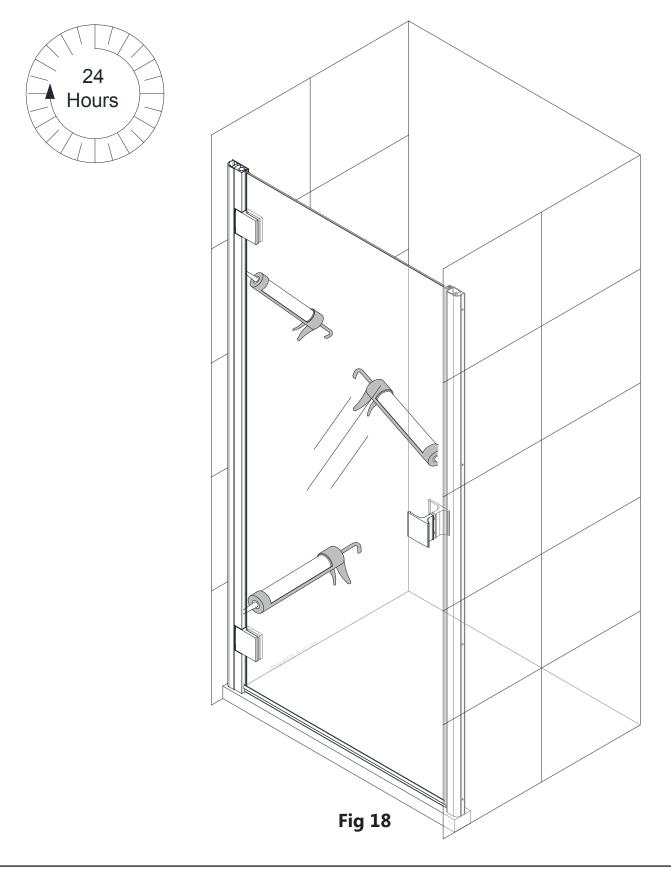

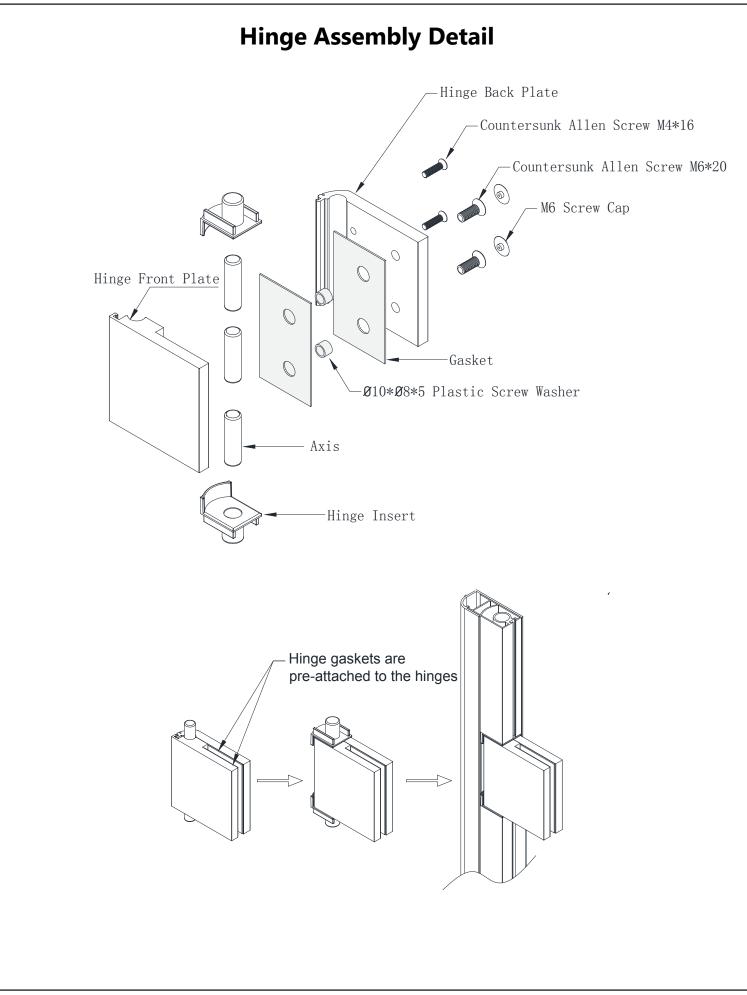

14. Notch the strike end of the **Bottom Strip (#12)** with a razor knife to fit around the **Strike Rail (#07)** on the edge of the **Door Glass (#06)**. Install the **Bottom Strip (#12)** onto the bottom of the **Door Glass (#06)**. (**Fig 17**)

15. From inside the shower, apply a good quality mildew-resistant silicone where the profiles meet the walls. Silicone may also be applied on the outside of the profiles if necessary. **(Fig 18)**

Allow 24 hours for the silicone to fully cure before using the shower.

Product Maintenance

<u>BASES and BACKWALLS</u>: To ensure long lasting life for your acrylic back walls: wipe them off after each use with a soft cloth. To clean the acrylic back walls use non-abrasive sprays or cream based cleaners. Avoid the use of aerosol spray cleaners. Never use abrasive cleansers, metal brushes or scrapers that could scratch or dull the surface.

<u>GLASS</u>: To ensure long lasting life for your glass shower products: wipe them off after each use with a soft cloth. Rinse and wipe off the glass using either a soft cloth or a squeegee to prevent soap buildup and water spots (Hard water can etch the surface of the glass over time if left to dry). To prevent scratching the surface: never use abrasive cleaners or cleaning products that contain scouring agents. Never use bristle brushes or abrasive sponges that may scratch the surface.

<u>HARDWARE</u>: To ensure a long lasting finish: wipe off the metal parts after each use with a soft cloth. Do not use abrasive cleaners or cleaning products containing ammonia, bleach or acid. If accidentally used, rinse the surface as soon as possible to prevent damage to the finish (peeling or corrosion). After cleaning the polished finishes, rinse thoroughly and wipe dry with soft cloth. Clean stainless steel surfaces at least once a week. When applying stainless steel cleaner or polish to stainless steel hardware, work with (not across) the grain. Never use an abrasive sponge or cloth, steel wool or wired brush as these may permanently scratch the surfaces.

NOTE: To maximize the life of your door, it is important to regularly inspect the glass and all hardware for misalignment, proper attachment, and/or damage. Contact DreamLine[®] with any questions or concerns.

DreamLine[®] shower doors are designed not to leak under normal usage when installed properly, and the water flow is not pointed directly at the vinyl seals or hinges.
