THE GENERAL CARE AND CLEANING OF ANY BAMBOO APRON SINK

For general maintenance, all bamboo sinks can be regularly cleaned with a mild detergent, warm water and a soft cloth. Wiping down and drying any sink after each use is the best protection against hard water creating blemishes which may become difficult to eliminate. For a thorough cleaning after extended use, or to remove stubborn stains, follow the instructions on the reverse side.

CLEANING INSTRUCTIONS (cont...)

Bamboo Apron Sinks

**SANITIZATION**

The best way to clean a bamboo sink is with a solution of mild soap and water. With a soft sponge, scrub the entire sink using a circular motion. Rinse and wipe-down with a soft cloth. We recommend Murphy Oil Soap®. An alternative mixture of one ounce of white vinegar to one quart of water can also be used for daily cleaning.

AVOID HARSH CHEMICALS

Ammonia-based cleaning products can soften the finish of bamboo sinks and so should be avoided. Nail polish remover, bleach, ammonia and similarly harsh chemicals should be totally avoided because they will cause significant damage to bamboo.

COLOR

No two bamboo sinks look alike. Each bamboo vessel is unique in its coloring because it is constructed of stalks collected from various bamboo farms, each with its own tone, and randomly combined with others to create a one-of-a-kind pattern sink.
