Waterfall Faucet Installation Instructions

Things You Will Need: Plumbers tape, wrench

1. Turn the handles on both the hot and cold water supply lines to the off position so that the water will not be running through the pipes.
2. Wrap plumber's tape around the two threaded ends of the supplied water supply hoses to prevent leaking. Attach these hose into the waterfall faucet body base. Tighten the hoses to secure them in place.
3. Lift the faucet & plate and position it over the hole in the countertop. Place the up pad on top of the countertop in the faucet groove where it goes. Slowly lower faucet & plate until they sit properly on countertop.
4. Place the down pad and clevis under the countertop securing them in place with the screws and tightening the nuts.
5. Attach the flexible water supply lines to the hot and cold water supply. Use a wrench to tighten the connections.
6. Turn the hot and cold water supply lines to the open position to allow the water to run. Allow the water to run for a few minutes to remove any possible air pockets in the pipes.
7. Place a clear bead of silicone caulk around the faucet plate base.
8. To place the glass disk on the faucet body, unscrew the two rings that are located on the top of the faucet body. Place the glass disk on the faucet and then hand-tighten the two metal rings back on.

- Unscrew cover.
- Unscrew ring and place plate on.
- Hand-tighten gently avoid over-tightening which may break plate.

- Unscrew ring and place waterfall faucet plate on faucet pressing down firmly.
- Screw ring back on tight.
- Screw top piece on and lever.
