

Bathtub Installation Manual

1. Important Note: Please read this manual carefully before starting the installation. If you have any questions about the installation process, consult a professional or contact the manufacturer's customer support.

2. Safety Warning: Prior to installation, ensure that all relevant electrical, water, and gas supplies are disconnected.

3. Note: This manual is a general guide, and different brands and models of bathtubs may have specific installation requirements. Always follow the manufacturer's provided installation instructions.

4. Step

Step 1: Preparation

1. Ensure that the bathroom floor is level, sturdy, and capable of supporting the weight of the bathtub.
2. Check the bathroom walls to ensure they are flat, without any indentations or protrusions.
3. Prepare the necessary installation tools, including a screwdriver, wrench, level, tape measure, rubber pads, sealant, and others.

Step 2: Positioning the Bathtub

1. Choose an appropriate location in the bathroom based on the shape and size of the bathtub.
2. Use a level to ensure that the bottom of the bathtub is flat. If necessary, add support material beneath the bottom of the bathtub to ensure stability.

Step 3: Connecting the Drain System

1. Install the drain device at the bottom of the bathtub, and connect the drain pipe according to the manufacturer's guidelines.
2. Seal the interface between the drain device and the drain pipe with appropriate sealant to prevent leaks.

Step 4: Installing Wall Covering

1. Depending on your preferences, install wall tiles, wall panels, or other materials around the bathtub. Ensure a snug fit between the wall covering and the bathtub.
2. Secure the wall covering material to the wall using suitable adhesive or glue, and use supports to hold the material in place until the adhesive is dry.

Step 5: Installing Faucets and Mixing Valve

1. Install the faucets and mixing valve above the bathtub according to the manufacturer's instructions. Ensure they are securely attached and connect them to the water supply pipes.
2. Tighten the water connections using a wrench and ensure they are leak-free.

Step 6: Final Checks and Testing

1. Double-check all connections and seals to ensure there are no leaks.
2. Turn on the water supply and test the bathtub's faucets and drain to ensure they are functioning correctly.
3. Make any necessary adjustments or repairs if issues are detected.

Step 7: Cleanup and Final Touches

1. Clean the bathtub and surrounding area to remove any debris or residue from the installation.

2. Apply additional sealant or caulking as needed to ensure a watertight seal between the bathtub and wall covering.

3. Dispose of any packaging materials and waste responsibly.

Congratulations, your bathtub installation is complete. Enjoy your new bathtub!
