

FAQ

What is the best way to remove the foil layer?

When removing the foil, we advise making sure the poster is on a hard flat surface such as a smooth wall or table.

For easy scratch off use the black guitar pick that you can find in your accessories set. You can use either the wide side for larger areas or the sharp edge for small countries, islands, and borders. If the country you have visited is extremely small (maybe you just came back from San Marino or Liechtenstein), you can use your fingernail or a simple toothpick.

After you have scratched the map, use the wiping cloth to remove small particles and keep your Seenada Goods Scratch Off map clean and beautiful.

What should be included in my accessories set?

Within every Seenada Goods Scratch Off World Map packaging tube, we include a free accessory set that includes:

- Black guitar pick for easy and smooth scratch
- Wiping cloth for removing small foil particles
- A set of stickers that you can use to mark your most desirable travel goals and make your experience more interactive (BE CAREFUL! After taking off the stickers from your map, the foil may be torn off together with the stickers).

What is the best way to care for Seenada Goods Scratch Off World Map?

We advise storing maps (before and after opening) in cool, dry conditions out of direct sunlight. Maps should not be hung above radiators, in direct sunlight, on damp walls or near heat sources. As this is a printed product, the colors of map may change and the foil may get harder due to the improper storage conditions. **Please handle the map with care to avoid accidental scratches on the foil surface of the map!**
