

Thank you for choosing Sunnydaze Décor. If you have any questions, comments or concerns please feel free to contact us by phone at: **888-881-4668**, by email: **customerservice@serenityhealth.com**, or you could also email us via our contact us page at: **www.SerenityHealth.com/contact-us/**.

We stand behind our brand and the quality of the items we sell. We will send new parts, or replace products at our discretion within the one year warranty period. Before we can help, you will need to provide proof of purchase with the date of purchase and photos of the defective merchandise. We will use the photos to determine the cause of defect and for future quality control.

SOLAR GARDEN LIGHT USER'S MANUAL

HOW SOLAR LIGHTS WORK:

During the day, the solar panel converts solar energy into electricity and stores it in the rechargeable battery. At night, the light turns on automatically through a light detecting sensor. How long the light illuminates will depend on your geographical location, weather conditions, and seasonal light availability.

CHOOSING AN IDEAL LOCATION:

Choose an outdoor location with full, direct sunshine where the solar panel can receive at least 6 hours of sunshine each day. Shady locations will influence the battery's ability to receive an adequate amount of a charge and shorten the working time of the light when night falls. The selected location should not be near strong ambient lighting, such as street lights, which may cause the light to turn off automatically because the light sensor inside will detect the light and will not turn on.

ATTENTION FOR FIRST TIME USE:

If there is a button in the battery box for the item please press it to the "ON" position. This will activate the light which will allow it to turn on and charge. When the ambient environment becomes dark, the solar light will automatically light-up. During the day, the solar light will turn off and collect energy from the solar panel automatically. If you press the button again, the light will turn off and cease to charge and discharge in order to preserve the battery.

If the light cannot turn on automatically at night after 24 hours of charging during the day, please check the following:

- If there is an on/off switch, make sure it is in the "ON" position.
- Check the battery to ensure that they are making contact with the terminals.
- Be sure the light is in a sunny location – not in a shady area – and the solar panel faces the sun.

PRECAUTIONS:

- The light is designed to work when it becomes dark. If there is not a strong light source nearby, the LED light may be very dim or not work at all.
- Although the battery has been charged by the manufacturer, the battery level will have decreased once it is received due to being in storage. Please allow the light to charge for 72 hours before the light starts to perform optimally.
- The surface of the solar panel must be kept clean. If the light's solar panel is dusty or dirty, it will influence the efficiency of the light's ability to charge.

REPLACE BATTERIES:

If the light stops working after it has been used for a long time (approximately over 18 months), the battery may be beyond its working lifespan. You may open the cover of battery to change a new rechargeable battery.
