

How to Measure for your Stovetop Cover

TRADITIONAL OVEN / STOVE / RANGE

If you prefer the topper sit *inside* the ridge (outer ledge of stove), please measure True-to-Size.

If you prefer the topper sit flush *next to countertop*, please add 1/2 inch to each side of width.

Products on site show the width is listed before the depth. (W x D)

Width: Measure top of stove from Left to Right (as shown in the picture below).

Take measurements inside the ridges.

If you have rounded corners, measure from the non-rounded starting point of corner.

Depth: Measure top of stove from Front to Back (as shown in the picture below). Take measurements inside the ridges.

NOTES:

If your measurements are less than 29.5 x 22, the topper will sit flat *inside* the ridges.

If measuring for a stove, cooktop or range with grates, please measure the height of your burner grates. Customer is responsible for accurate measurements.

HOW TO MEASURE FOR YOUR STOVETOP COVER COOKTOP (BUILT-IN OR ISLAND)

Width: Measure outside to outside (left to right). **Add 2" to measurement.**
Depth: Measure outside to outside (front to back). **Add 1/2' to measurement.**

If measuring for a cooktop with grates, please measure the height of your burner grates.

Sizes available: 1 inch, 2 inch, & 2.5 inch

Electric StoveTopper. Gas StoveTopper

***Warning: This Stovetop Cover is not to be used as a cooking surface.**

For gas stoves, it is recommended that the Stovetop Covers only be used on models with electronic ignition (starters). Use with pilot light-type stoves is not recommended.
