Measure

Hammer

Safety Glass

Knife

Pencil/Marker

Phillips  
Screwdriver

Level

Putty Knife

Drill

Drill Bit

## DIMENSIONS/TECHNICAL DATA

**ATTENTION!** Dimensions may vary by up to  $\frac{3}{8}"$ . It is highly recommended to pull all dimensions of actual model for installation and measuring purposes.

## INSTALLATION INSTRUCTIONS

**IMPORTANT!**  
Shut off main water supply prior to installation!

### Be sure to re-inforce wall before installation.

We recommend a 2"x12" securely fastened to wall studs at the desired height for your installation.

1. Determine the height you want. Place basin against the wall uses a level to make sure both sides are level — Mark location on wall for mounting holes on the back of the sink.
2. Position each metal mounting bracket against the underside rear of the basin and against the wall. Mark the location of mounting bracket holes on the wall.
3. Remove the basin from the wall. Wall should be reinforced before continuing.
4. Start to drill a hole in 2"x12" re-inforced wall for mounting hardware. Screw large wood screws provided into the wall.
5. Before replacing the basin, it would be convenient at this point to mount the faucet according to the manufacturer's instructions.
6. Slide sink onto bolts and ensure that it is level. Slide plastic flange washers and metal washers onto bolts — thread hex nuts on snugly.
7. Hold basin on wall brackets and ensure that it is level. Secure the sink to the wall using bolts through holes in the back of the sink.
8. Connect all supply tubes to the faucet. Connect trap and drain assembly as described by the manufacturer.

**NOTE: Determine whether your installation requires Hangers (pair) or a Bracket (one). These can be purchased separately to provide added support.**
