Answers & Questions

FAQ

1. Q: How to release footrest and recline?

A: (1) There is a black handle in the right side of the chair, please lift it up with some strength, then the footrest will be opened up. Then you can lie in the chair with some strength about your back so that the back of the chair will recline too.

(2) When the footrest release, please sit in more deeper of the seat, not just in front of the seat, also put two hands on both armrests, then lie down and use both back and hands strength, it will be much easier.

Note: The chair can not always keep in reclined position when you leave the chair.

2. Q: How to make the footrest go back down?

A: (1) Please try to keep the back of the chair in the seated position, It's a new chair so need more strength to lock down and you can try some times to close footrest with some force and it will work. When you hear a click sound, footrest closed.

(2) Another solution is get out of the chair and try to push the footrest back with your hands. And it will be much easier after several times use, please note it.

Note: Please try to solve the problem by the way above, feel free to send the email to us for further help if it's still unavailable. We will try our best to help you solve your all concerns!

Parts List

Box A		Box B
